How to trace ufs and harvey....

get the tracer enabled version of ufs from https://github.com/sevki/harvey-go/tree/trace

(there is also a PR for this https://github.com/Harvey-OS/go/pull/16but that isn't important .B right now)

```
git clone --branch trace git@github.com:sevki/harvey-go.git ufstraced
cd ufstraced
go build -o ufs ./cmd/ufs
cp ufs $HARVEY/util/ufs
```

start jaeger

```
docker run -d -p 6831:6831/udp -p 16686:16686 jaegertracing/all-in-one:latest
```

start ufs with

```
-trace -debug 1
```

something like

```
$HARVEY/util/ufs -root=$HARVEY -trace -debug 1 &
```

go to 0.0.0.0:16686/
