Abstract

This article is briefly describes how to setup a sample application that works with OPC clients.

Turns out that at my first day at work I had to wrestle with this stuff.. because I was looking for exchange specific solution I failed... if it had occur to me to look for a WCF specific thing it would have saved me a ton of time...

anyways here is what you need to do in your code declare these

```
using System.Net;
using System.Net.Security;
using System.Security.Cryptography.X509Certificates;
public static bool OnValidationCallback(object sender, X509Certificate cert, X509Chain chain)
{
    return true;
}
```

put this before your code executes

```
ServicePointManager.ServerCertificateValidationCallback = new RemoteCertificateValidationCall
```

and you are good to go..
