

q : what?

a : ok software is software that is ok. it's not the best, it's not the worst, it's just ok.

q : what & why?

a : ok software is a collection of software and services that is known to work "ok" together. speicially in the landscape of things that should work well together but don't for no good reasonsome reason.

q : how far along?

a : with varying levels of maturity a non exhaustive list of ok software is:

name	description	maturity
okstd	a standard library for ok software	??
crashdump	a crash dump service	??
ok.software	a forgejo service that hosts ok software	??
bugz.ok.software	bugzilla instance	???
phoninghome	a service that waits for people to call home	??
docucities	a documentation service	??
issueis	a service that hosts issues	??
skillforest	make beautiful skill trees	??
okLinux	a linux distribution	??

??Seeding ??Growing ??Mature ??Maintained ??UnMaintained ??Sunset

q : what is it not?

a : ok software is not the best software, it's not an endorsement, it's not a recommendation, it's just convinience.

q : how can I help?

a : don't you have something better to do? seriously? the stated goal of this project is not to be the best, it's to be ok. Go build something great and leave me alone.
